# UNDERGRADUATE TEACHING (AND LEARNING) OF MATHEMATICS WITH OPEN SOURCE TEXTBOOKS

SCHOOL OF  
EDUCATION  
UNIVERSITY OF MICHIGAN

University  
of Colorado

# OPEN SOURCE OPEN ACCESS TEXTBOOKS

- Open source: The source file(s) are freely available for others to download and use.
- Open access: When only a PDF or other digital format is freely available and printable  
An electronic version that cannot be printed **is not** open access.

We use the expression “open textbook” to mean either open source or open access.

# ADVANTAGES OF OPEN TEXTBOOKS

- No proprietary interfaces
- Compact and portable
- Accessible from any device—laptop, tablet, phone
- Current: edit and refresh at will, never out-of-print
- Crowd-sourced proof-reading
- No pressure to satisfy market segments
- Many output formats
- **FREE!**

# THE PROBLEM

What is the potential of open textbooks to improve mathematics teaching and learning?

- One-to-one observations and interview studies → how much students understand (e.g., Sierpinska, 1997)
- Survey studies → activities students say they do: “prepare for exams” (e.g., Weinberg, et al 2012)
- Data analytics → clustering of students (e.g. Philips, et al 2010)

# ADDRESSING THE PROBLEM

Exploratory study to investigate instructor and student uses of two open source textbooks:

[First Course in Linear Algebra](#) by Rob Beezer

[Abstract Algebra: Theory and Applications](#) by Tom Judson

- How do instructors use the textbooks?
- How do students use the textbooks?
- Are there differences in use between dynamic and PDF formats?

# THEORETICAL FRAMEWORKS

Vygotsky's Subject-Tool-Object

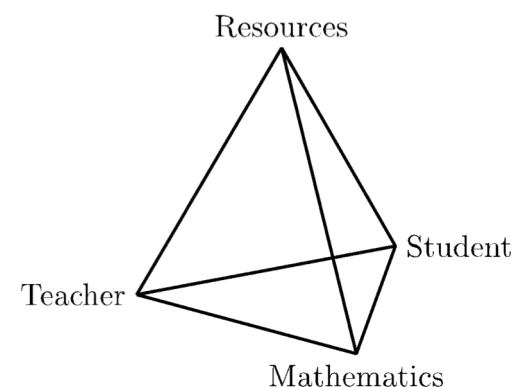

Rabardel's  
Duality of Instruments

Documentational Approach

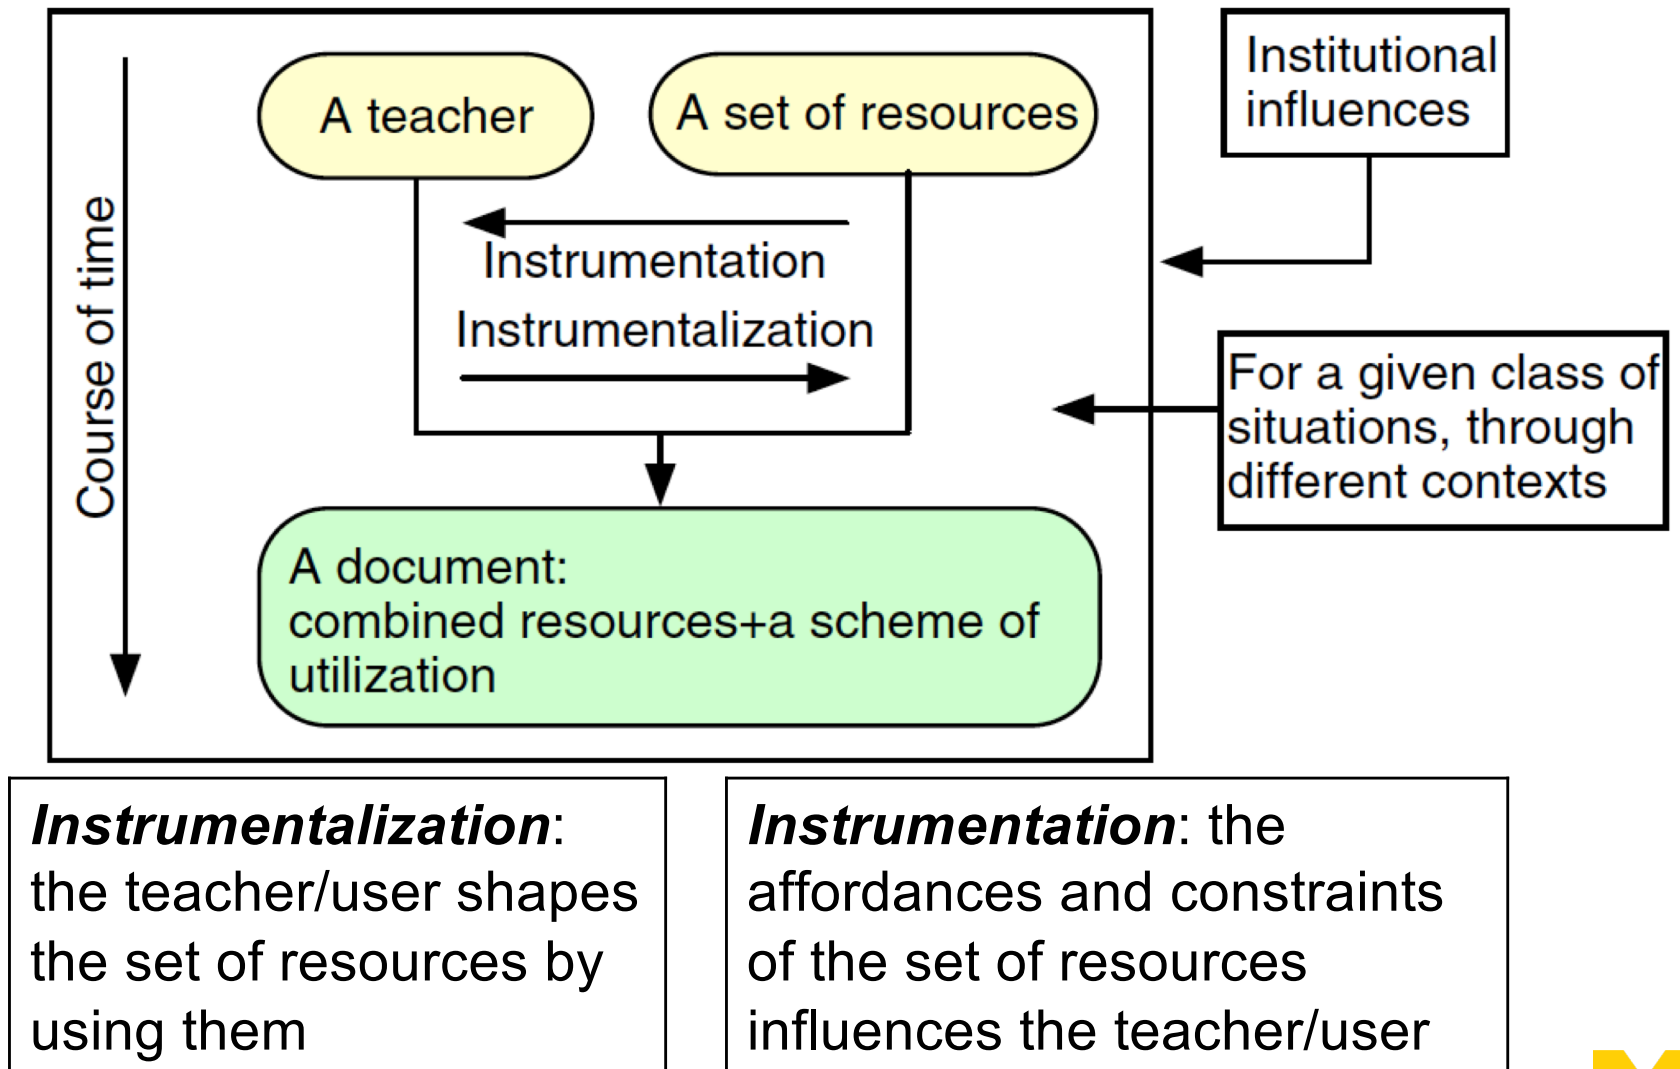

Instrument= Artifact + Scheme of use

Rezat's didactical  
tetrahedron

**Document:** Resources + Schemes of Use. **Resources:** A collection of artifacts gathered for a specific purpose/class of situations. **Schemes of Use:** Uses (rules of action) + Operational Invariants (when those rules are called for and why)

# DOCUMENTATIONAL APPROACH

# DESIGN

- Mixed methods (concurrent)
- 11 instructors + students, 10 institutions, 7 states

Format	Textbook	Course	Instructor	# of Students
HTML	Beezer	Linear Algebra	T1	29
			T4	12
			T8	22 (2 <sup>nd</sup> term), 29 (3 <sup>rd</sup> term)
			T9	23
			T11	26
			T12	29
	Judson	Abstract Algebra	T3	12
			T5	27 (2 <sup>nd</sup> term), 22 (3 <sup>rd</sup> term)
PDF/Hardcopy	Judson	Abstract Algebra	T7	19
	Beezer	Linear Algebra	T10	14
Hardcopy	Strang	Abstract Algebra	T2	37

# DATA COLLECTION PLAN

	Beginning of Term	Week in the term						End of Term
		2	4	6	8	10	12	14
Teacher surveys	X							
Teacher logs		X	X	X	X	X	X	
Site visits (one week): Three teacher interviews								
I1: Planning								
I2: Enacting								
I3: Reflecting								
Class observations								
Computer-generated data of teacher and student textbook use								
Student logs		X	X	X	X	X	X	
Student focus groups								
Student survey								
Student tests		X						X

# INSTRUCTORS CREATE LECTURE NOTES...

An instructor

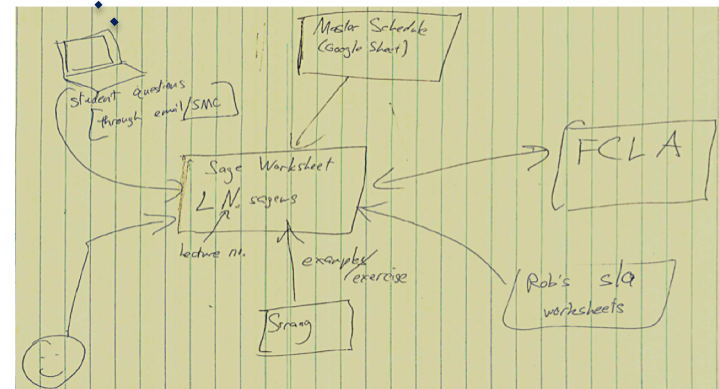

A set of resources

# INSTRUCTORS CREATE LECTURE NOTES...

*“The geometric interpretation in  $\mathbb{R}^3$  with more than two vectors linearly dependent better reveals the concept of linear dependence [than the technical definition of linear combinations being zero.]”*

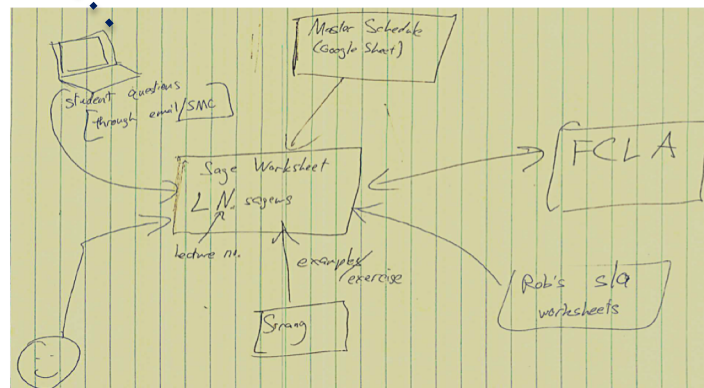

# INSTRUCTORS CREATE LECTURE NOTES...

**Instrumentalization:** the teacher/user shapes the set of resources by using them

An instructor

A set of resources

*“The geometric interpretation in  $\mathbb{R}^3$  with more than two vectors linearly dependent better reveals the concept of linear dependence [than the technical definition of linear combinations being zero.]”*

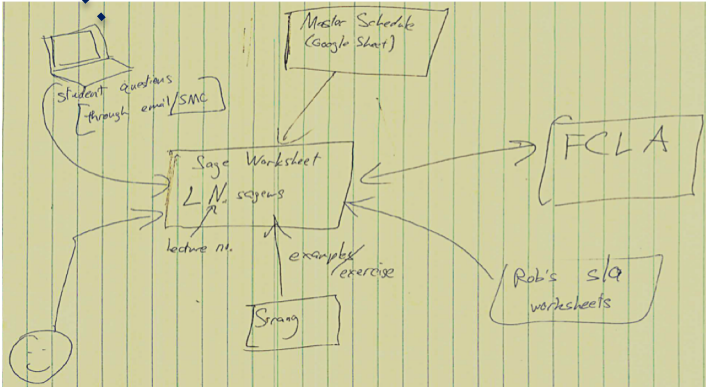

# INSTRUCTORS CREATE LECTURE NOTES...

**Instrumentation:** the affordances and constraints of the set of resources influences the teacher/user

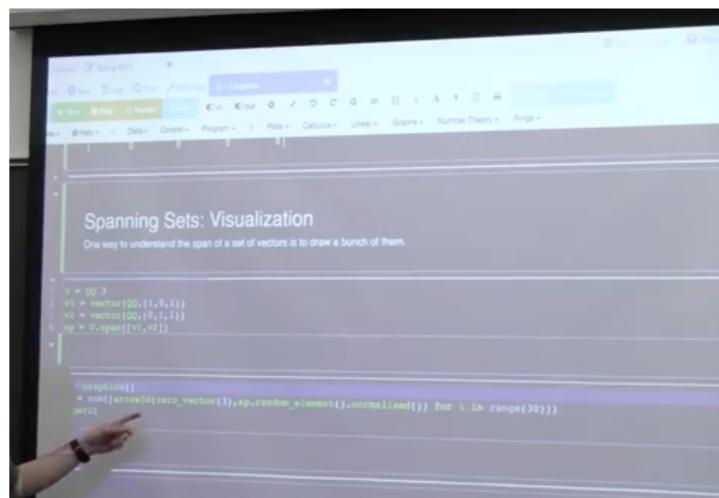

*“The geometric interpretation in  $\mathbb{R}^3$  with more than two vectors linearly dependent better reveals the concept of linear dependence [than the technical definition of linear combinations being zero.]”*

# INSTRUCTORS CREATE LECTURE NOTES...

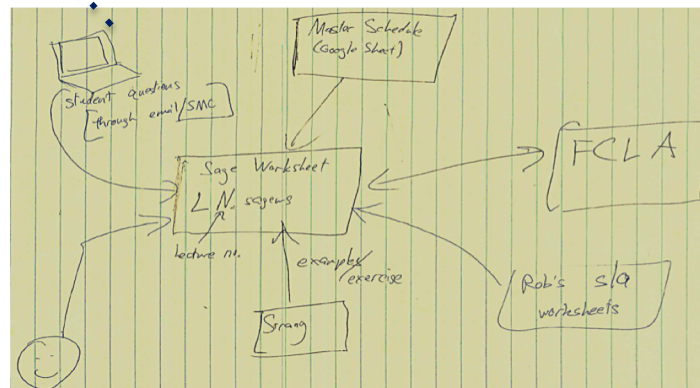

Lecture notes embedded in Sage worksheet and simultaneous student work.

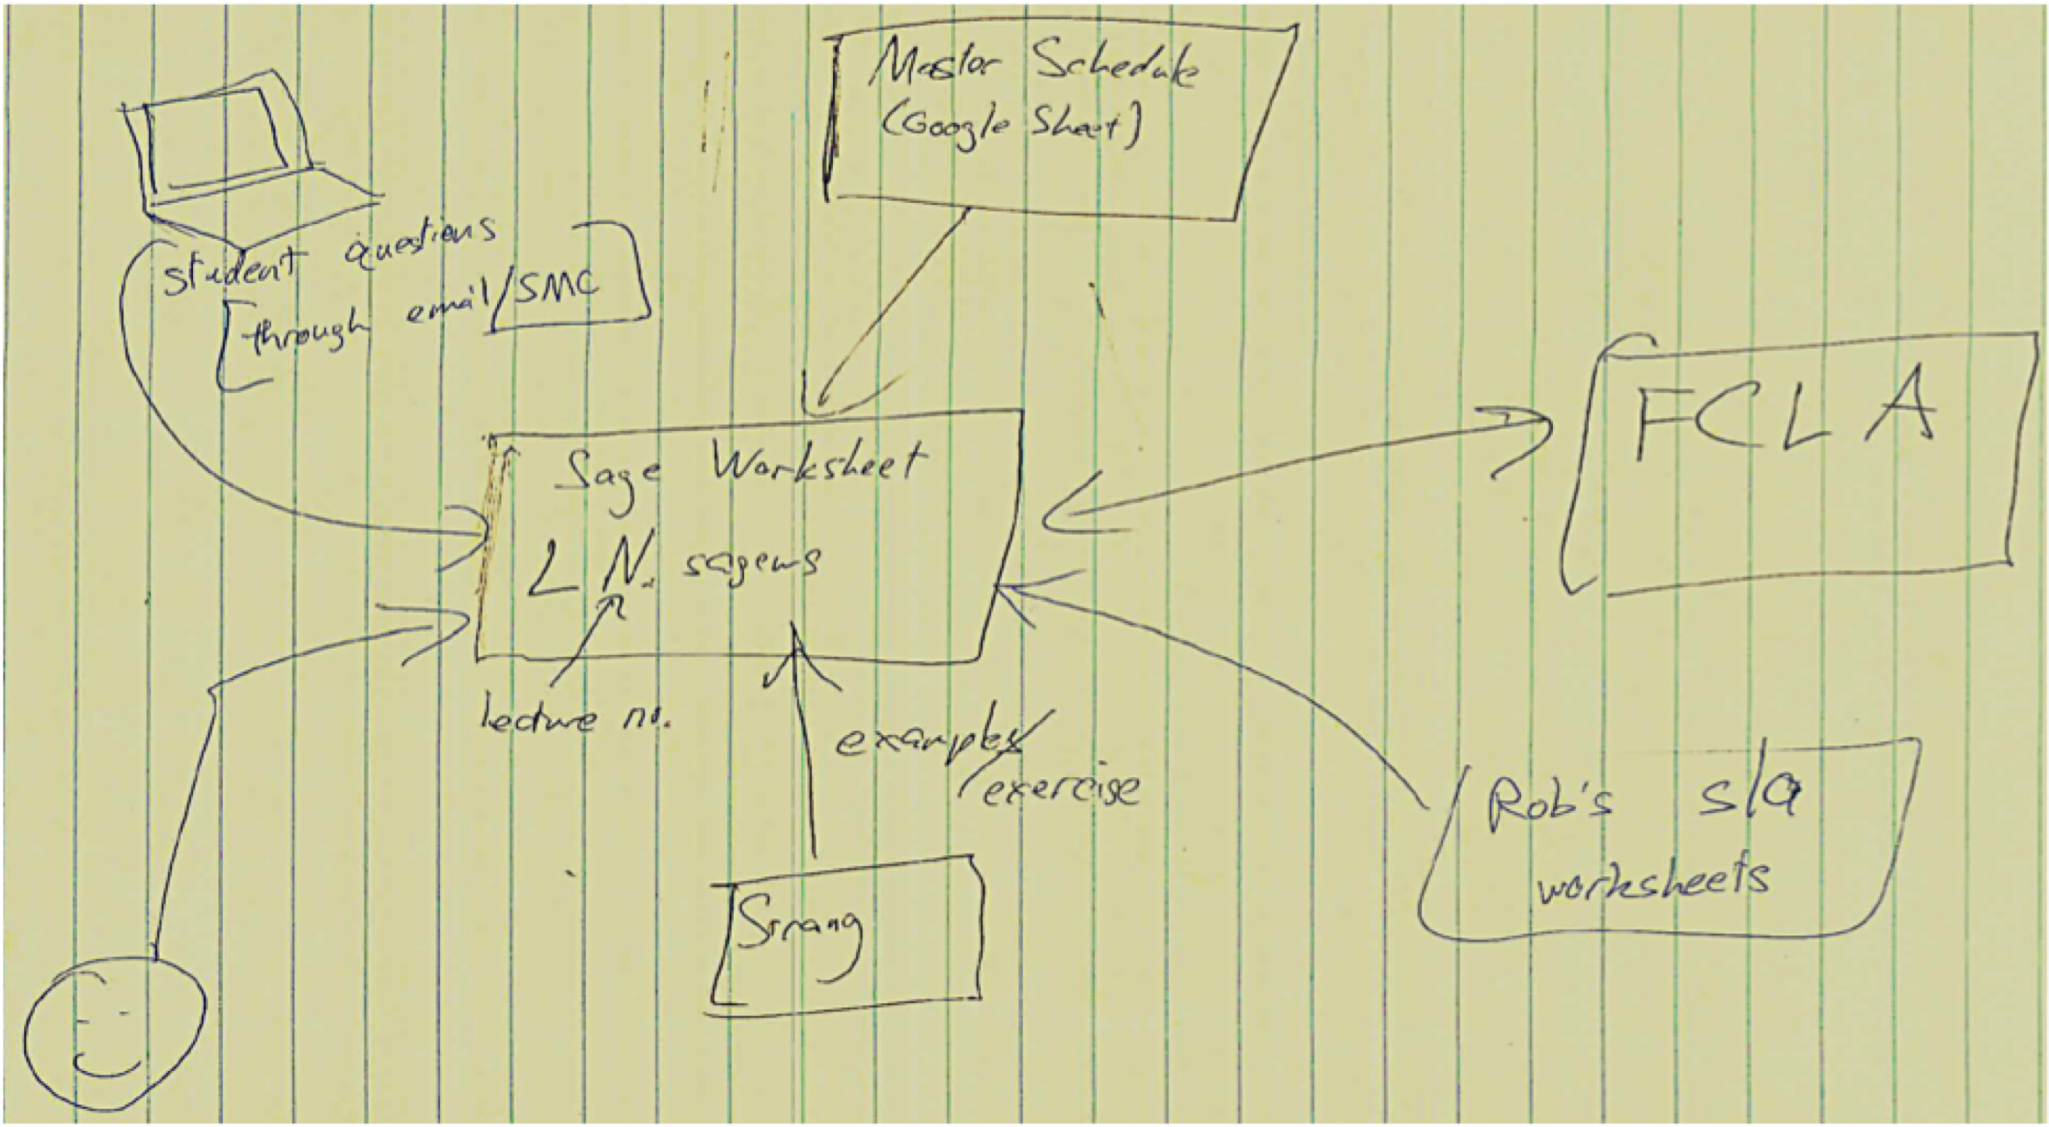

An instructor

A set of resources

*“The geometric interpretation in  $\mathbb{R}^3$  with more than two vectors linearly dependent better reveals the concept of linear dependence [than the technical definition of linear combinations being zero.]”*

# INSTRUCTORS CREATE LECTURE NOTES...

	Lecture Notes	Connection to the Textbook
Less to More Dynamic 	Handwritten notes in paper (from points of reference to full notes)	References to the textbook
	Online videos using the textbook	<ul style="list-style-type: none"> <li>• Whole parts of the textbook</li> <li>• Practice problems from the textbook in accompanying problem sheets</li> </ul>
	Beamer/Power Point presentations	Hyperlinks to the textbook
	Sage worksheets	<ul style="list-style-type: none"> <li>• Hyperlinks to the textbook</li> <li>• Capabilities for the production of graphs and calculations of the textbook</li> </ul>

# STUDENTS USE THEIR TEXTBOOK

How much do you use... ( $N = 103$ )

Textbook Elements	Scale of Use		
	A great deal or A lot	Moderate	A little or Not at all
Practice Problems	67%	21%	11%
Examples	65%	19%	17%
Solutions	56%	25%	19%
Exposition	55%	24%	21%
Definitions	40%	36%	24%
Theorems	31%	36%	34%
Proofs	13%	36%	50%
Propositions, properties, corollaries	12%	35%	52%

# STUDENTS USE THEIR TEXTBOOK...

**“I use the practice problems of the textbook to...**  
(N = 103)

# STUDENTS USE THEIR TEXTBOOK...

**“I use the solutions of the textbook to...**  
(N = 103)

# INSTRUMENTATION: TEXTBOOK + SCHEMES OF USE

	Rules of Action	When/Why
Students	“Read”	Study for examinations/class ( <u>study notes</u> )
	Look for definitions	Clarify meaning to work out homework ( <u>homework solution</u> )
	Study examples/proofs	Work out the homework ( <u>homework solution</u> )
Instructor	Identify major course topics	Create <u>syllabus</u> before the term starts
	Identify theorems and definitions	Create <u>lecture notes</u> to be consistent
	Identify examples	Clarify definitions/theorems in class ( <u>lecture notes</u> ) Visualize definitions ( <u>lecture notes</u> )

# CONCLUSIONS: INSTRUCTOR USES OF OPEN TEXTBOOKS

- Use according to...
  - perceptions of teaching and learning at university level  
(Pepin & Haggarty, 2001)
  - knowledge of availability of, and familiarity with, dynamic features
  - When features can be seamlessly integrated into their usual practices
- Attention to sequencing of topics in the textbook
- Keep notation, definitions, and theorems  
(no exploration of openness of textbook)

# CONCLUSIONS: STUDENT USES OF OPEN TEXTBOOKS

- Most frequently reported using practice problems, examples, and solutions of their textbooks

(Weinberg, Wiesner, Benesh, & Boester, 2012)

- For homework or for test preparation

(Anastasakis, Robinson, & Lerman, 2017; Gueudet & Pepin, 2018)

- Abstract algebra: greater use of theorems and proofs; pre/re-reading and multitasking
- Linear algebra: examples, practice problems, solutions; taking notes, skimming, or not using the textbook

# Next Steps

1. Adding an intervention component
  - workshop in summer on using features of the open textbooks:
    - open source
    - knowls
    - Sage programming
  - pre-workshop measures vs. post-workshop measures
2. Adding a calculus course with WeBWork

# UNDERGRADUATE TEACHING (AND LEARNING) IN MATHEMATICS WITH OPEN SOFTWARE AND TEXTBOOKS
